What are the risks and what could I get in return?

Risks

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class.

This means that potential losses due to the future performance of the product are rated a medium-low level and that adverse market conditions are unlikely to affect the sub-fund's ability to return the initial capital.

Be aware of currency risk when your reference currency differs from that of the product. You might receive payments in a different currency, so the final return depends on the exchange rate applied.

This product does not include any protection from future market performance so you could lose part or all your investment. The significant risks not detected by the synthetic indicator, are detailed in the "Main risk factors" section of the relevant Sub-Fund Appendix of the Prospectus.
